## Education

**Carleton University** **Sep. 2021 – May 2026**
*Bachelor of Software Engineering (Co-op)* *Ottawa, ON*

- **GPA:** 3.9/4.0 | **Awards:** Golden Key International Honour Society (Top 15% of program), Dean's Honour List 2021 - 2024
- **Relevant Coursework:** Algorithms & Data Structures, Operating Systems, Computer & Software Architecture and Design

## Skills

**Languages**: Java, Python, C, C#, JavaScript, SQL, HTML / CSS, Go, Racket
**Frameworks & Libraries**: React, Spring Boot, Node.js, ASP.NET, Blazor, JUnit, Selenium NumPy, Matplotlib, SciPy
**Tools & Services**: Docker, Git, Linux, PostgreSQL, Jenkins, GitLab, Visual Studio, SQL Server MS

## Experience

**Software Engineer Intern** **Sep. 2024 – Present**
*Ranovus* *Ottawa, ON*

- Developed an automatically generating API that allows for high level interfacing with Common Management Interface Specification defined registers of an optical engine using **I2C**, which was delivered to Ranovus' customers
- Architected and maintained codebases that facilitate communication with various test systems designed to test a cutting edge optical engine

**Full Stack Developer Intern** **Jan. 2024 – Aug. 2024**
*Environment and Climate Change Canada* *Gatineau, QC*

- Contributed to the refinement of the Canadian Notification and Movement Tracking System (CNMTS) application by addressing multiple bugs in both front-end and back-end components, resulting in improved performance and functionality across subsequent releases
- Developed specialized web pages within CNMTS targeted at enforcement officers utilizing **C#** and **ASP.NET** , significantly enhancing internal operations, accessibility, and efficiency
- Implemented a full-scale remodel of the Greenhouse Gas Reporting Program (GHG) application's front-end, complemented by an extensive refactoring of **database schemas** to optimize data integrity and query performance
- Engineered comprehensive test suites for GHG API endpoints using **xUnit**, and automated front-end testing with **Selenium**, ensuring robust code quality and seamless user experience

## Projects

**Firefighting Drone Swarm Simulator** | *Java, Multithreading, UDP, Distributed Systems*

- Built a real-time, fault-tolerant drone dispatch simulator using **Java threads** and **UDP** across 3 subsystems
- Implemented a multithreaded scheduler using the **State Pattern** for drone coordination, messaging, and task flow control

**Sysc.ca** | *JavaScript, React*

- Developed a comprehensive online **React**-based website for software engineering students that provided centralized access to all class materials, a GPA calculator, and various program-related resources
- Led the design and development of a user-friendly FAQ section within the website, which served as a valuable knowledge hub for students seeking quick answers to program-related queries
- Collaborated closely with team to integrate an innovative GPA calculator feature into the website, allowing students to track their academic progress and make informed decisions regarding their coursework
